Syntax CxLink Documents paves the way for SAP innovation in the cloud.

Your cloud journey may be a quest for scale and agility, or to leverage powerful hyperscaler functionalities that you can access from within your SAP applications. Either goal gets you to the same destination of innovating more with your SAP investments.

And the road to innovation is paved with the documents for the applications, tools, compliance issues, transaction details that simultaneously propel and chronicle the cadence of your business.

Every enterprise needs to process countless documents for proper operation. Invoices, sales orders, or purchase orders are examples of the types of documents needed to support every business process.

The positive impact of each advance in document management innovation may sometimes reverberate throughout your business.

CxLink Documents was designed to leverage the innovations delivered by hyperscalers and embed them into the product. For example:

▪ CxLink Documents is an SAP-Certified Native Application, written in ABAP and leverages the ABAP Software Development Kit for AWS.

▪ CxLink Documents is maintained by Syntax and is regularly updated with the latest AWS and SAP features and functions, providing the most robust document management solution available. That is you can be confident in not worrying about and dedicate your resources toward addressing other business challenges.

▪ CxLink Document leverages hyperscalers' object storage services to store SAP documents contributing to a more efficient, reliable, and cost-savvy setup.

▪ CxLink Documents is available in the AWS Marketplace.

CxLink Documents was purpose-built to help make it happen.

An unavoidable issue for organizations running SAP is that pathways to the cloud are difficult. And once you make the migration to the cloud, the difficulties continue. You're generally captive to the SAP portfolio for updates or innovations, and the SAP solutions for integrating with hyperscalers' technology have been reported to be both costly and have a reduced set of functionalities vs. what the hyperscalers offer.

CxLink Documents is offered as a single-source answer to the cloud-related issues related to documents that you encounter running SAP. It is a Software as a Solution package specifically optimized for AWS, which is maintained by Syntax and is regularly updated with the latest AWS and SAP features and functions, providing the most robust solution available for document management.

CxLink Documents

Key features:

- An SAP-certified software add-on to SAP ERP, SAP S/4 HANA, and any SAP NetWeaver-based application.
- Uses hyperscalers object storage services for storing SAP documents and unstructured data.
- Fully integrated with the SAP document management module (GOS/DMS).
- SAP Archivelink compatible.
- It has integrated security features:
    - HTTPS communication with SSL certificates between SAP and AWS
    - Encryption supported on client (SSF) and with cloud native Key Management Services (KMS)
    - IAM Policies for restricted access
- Customizing and management console built with SAP Webdynpro and SAP Fiori.
- Easy add-on, deployment and integration:
    - Packaged Add-On using SAP Add-On Assembly Kit
- Licenses are available in one- or three-year terms.

Main benefits:

- **Simplification**
  Having less infrastructure to manage because of CxLink Documents being a serverless solution, and the ability to consume hyperscaler technologies sooner and more easily.
- **Resiliency**
  Building on AWS Global Infrastructure was a choice for the most resilient cloud option by design.
- **Enhancements**
  Enrich your SAP applications with AWS capabilities and enjoy ongoing updates and integration of your SAP applications with AWS cloud-native services.
- **Cost Reduction**
  Lower costs across software, infrastructure and operating areas associated with your SAP deployment, including hidden costs, such as linking document retention policies with Amazon S3 Storage Classes to optimize cost savings.
- **Support**
  Enjoy support for all CxLink Products with a dedicated team of specialists.
