

Syntax Migration Action Plan for Oracle E-Business Suite

Ensure a smooth transition to the cloud with a clear migration roadmap

- Reduce licensing costs
- Mitigate risk and downtime
- Align with your business strategy

Overview

Oracle E-Business Suite (EBS) applications are critical systems of record for businesses, supporting key functions such as HR, manufacturing, finance, customer success, supply chain, and procurement. As a result, EBS is often one of the last systems to migrate to the cloud—an undertaking that can be complex and challenging. However, cloud infrastructure delivers essential benefits like cost optimization and modernization, making migration a strategic necessity in today's competitive landscape.

That's where Syntax comes in. We work with you to analyze your EBS environment and create a step-by-step Migration Action Plan (MAP) that aligns technology with your business strategy.

Advisory Services

- **Licensing review:** Evaluates licensing over- or under-utilization and helps resolve license issues. Since Oracle has complex licensing rules for their application, middleware, and database options, it's not easy to remain aware of usage. If you are not using all your licenses, you can save money by cancelling or assigning licenses. If you are overusing licenses, you can decide how to resolve this often-costly issue before migration.
- **Workload analysis:** Provides a thorough impact analysis to understand how each workload aligns with your business strategy. By prioritizing workloads that deliver the greatest value while mitigating potential risks, you can ensure a smoother transition and maximize the benefits of your modernization efforts.
- **Infrastructure analysis:** Reviews current structure versus cloud platform functionality—including how to manage customizations, storage, platform, integrations, and innovations—and recommends the right cloud path to meet your Oracle EBS strategies.
- **Migration plan:** Outlines costs, timelines (including any downtime), risk mitigation, and a step-by-step plan for migration. This helps you make your business case by justifying expenses and addressing stakeholders' concerns around costs, business disruptions, and operational risks.

Benefits

- **Fulfill your primary business reasons for modernization:** By focusing on outcomes, you can prioritize initiatives that deliver the greatest impact, ensuring your strategy produces tangible value across the organization.
- **Optimize your Total Cost of Ownership:** Gain a clear understanding and predictability of the migration, cloud, license, and management costs when modernizing your EBS investment.
- **Ensure a smooth transition:** With a detailed migration roadmap, you can avoid potential issues and align expectations for risk, cost, and timing when making your business case.
- **Resolve any licensing issues:** Licenses can be costly if you aren't adhering to complex licensing rules. Get ahead of issues before you migrate.
- **Rely on industry expertise:** Your team may not have the right experience to plan a migration of business-critical applications. Syntax has over 30 years of expertise in Oracle applications and technologies.
