

CASE STUDY

Novexco

## Expanding growth potential and streamlining data management with scalable solution

Based in Quebec, Canada, Novexco has provided office services and distributed office supplies to enterprises for over 25 years. Manual processes made data visibility challenging on the company's previous homegrown ERP system which couldn't sustain projected growth. The distributor sought a new approach that could **scale with business demands** while providing a centralized location for all data.

Now, with an ERP solution that manages all departments in one system, Novexco's operations run more efficiently than ever before. The company is now equipped with technology that best supports growth and future company acquisitions.

# Integrating finance functions with SAP® S/4HANA

## Before: Challenges and opportunities

- Outdated homegrown ERP solution with legacy processes
- Finance department managed outside company
- Struggle with integrating newly acquired companies into business
- Lack of analytical tools for forecasting data
- Previous solution unable to support growth and acquisitions

## Why SAP and Syntax

- Universal access to all data
- Enhanced data visibility for sales reps
- Able to build upon processes already in ERP framework
- Syntax local to Novexco with industry experience

## After: Value-driven results

- Enhanced data integrity with new ERP solution
- Integrated finance task management
- Scalable system that grows with business
- Operations efficiency maximized
- Standardized, fully automated business processes
