SYNTAX CxLink SmartStore

Optimize SAP document management and archiving, enabling secure cloud storage and reduced TCO

- Offload SAP attachments and archives to cloud storage
- Minimize database size and save costs
- Ensure regulatory compliance and robust information security

SYNTAX

Overview

Are you slowed down by countless document attachments and legacy data? Does your SAP Cloud ERP function more like a data warehouse than the powerful digital hub it should be? Organizations today face significant challenges in managing the growing volume of SAP data, which leads to inflated database sizes, increased costs, and reduced performance.

Syntax CxLink SmartStore provides SAP-certified cloud-based solutions designed to tackle the critical challenges of data management during SAP migrations to cloud ERP. It simplifies data classification, archiving, and accessibility by moving critical documents to secure, cost-effective cloud storage, ultimately helping companies reduce total cost of ownership (TCO) and increase performance.

What's in Syntax CxLink SmartStore

Syntax CxLink for ArchiveLink seamlessly integrates your SAP system with cloud storage platforms for efficient document archiving and management. Leveraging the SAP ArchiveLink protocol, documents are offloaded from your SAP database to secure and scalable cloud environments such as AWS or Microsoft Azure. This reduces database size, optimizes operational costs, and eliminates the need for intermediate servers, while maintaining full compliance.

Syntax CxLink for ILM enhances SAP ILM capabilities by seamlessly integrating it with scalable cloud storage, such as AWS, to host and manage data. It enables businesses to store and retrieve data according to audit areas for tax legislation, product liability, and audit compliance while optimizing document management.

Key Benefits

- **Reduced TCO:** Storing all SAP archives in the cloud reduces database size, leading to significant cost savings

- **Seamless integration with zero IT footprint:** Available as an SAP add-on, it is installed in the customer's own ERP system, omitting the need for intermediate servers between SAP and cloud providers

- **Enhanced accessibility:** Makes SAP data available across the business in a centralized repository to unlock faster access to data and the possibilities of applying AI-driven analytics

- **Ensure security and compliance:** Simplify adherence to all applicable archiving and data document retention rules and regulations
